Dear counsellor Chen,

First let me share our gratitude for the meeting with HE Ambassador Zhan Minister Simhon had a very interesting and inspiring meeting and he is waiting the opportunity to host the Ambassador as agreed. Please provide us the contact details for the coordination for this venue.

As agreed, we are enclosing some data regarding one of the issues we had discoids and we would highly appreciate the ambassadors assistance in resolving thus challenge.

We have a long discussion with the Chinese authorities regarding the Health Certificate protocol between our countries.

Foot & Mouth Disease (FMD)
Israel vaccinates all her herds agianst FMD including the bulls. Therefore our classification is – country that is not free of FMD. Please see clouse 3e – FMD.
China looks at Israel as one country with no zones.
In the OIE regulations it is written that we have to be free of any outbursts of FMD 6 months prior to Export.
As you see in the HC we solved this with different countries wit a radius of 30 km where no case of FMD has accrued.

Blue Tongue (BT)
The same as above (for the FMD). Please see in clouse 3f.
In the BT case we added also clinical case as a sign for the outburst of this disease.
Israel does not vaccinate against this disease, but as you can see in the HC the OIE gave the regulator the option to check the virus in the semen and we do it, as you can see in 3f.

As minister Simhon stated, resolving this issue can create a big opportunity for collaboration between the two countries in one of the most important fields of agriculture. and it alines with the statement of former Chinese premier, HE Wen

Jiabao that stated “I have a dream to provide every Chinese, especially children, sufficient milk each day”.

we have the opportunity to open a door that will increase milk production in china dramatically using Israeli technology and knowhow.

please let us know how we can proceed with this matter.

Highest regards,

Sharon Kedmi
